

More about filters

Star filters, as well as giving starry effects, can also be used as soft focus filters. This filter softens scarred skin, lines and wrinkles. There are many star filters, some really spectacular

Speed filters give the illusion of movement. When combined with other filters wondrous images can be shot.

Super speed filters really show great streaking.

Spot filters can highlight the centre of the image while blurring the surroundings. This filter allows you to highlight just what you want in focus.

Spot filters work wonderfully on a bunch of flowers, allowing you to highlight just one bloom. There are many coloured spot filters as well as clear filters.

You can buy rainbow filters, use coloured Vaseline on cheap filters or cheap glass offcuts. The list of filters available is endless so why not have a go.

Below are some images from the COKIN filter book *with thanks*.
